

A. MACHADO

Orthoptera from the Canary Islands collected
by Dr. G. L. van Eyndhoven

by

G. KRUSEMAN & C. A. W. JEEKEL
Institute of Taxonomic Zoology (Zoological Museum), Amsterdam

The Orthoptera recorded in this paper were collected by Dr. G. L. VAN EYNDHOVEN during an excursion to the Canary Islands in November 1970. One of the faunistically lesser known islands, Lanzarote, was visited, and the interest of the collection focusses on an extension of the previous distributional data.

We take pleasure in publishing this list of Orthoptera to pinpoint just one of the many valuable secondary contributions to our institute made by our retired acarologist.

List of the species collected

BLATTODEA

- Phyllodromira brullei* Princis:
Tenerife, El Portillo, 2000 m, 10.XI; 2 ♀.
Periplaneta americana (L.):
Tenerife, Puerto de la Cruz, 13.XI; 1 ♂.
Tenerife, north of Santa Cruz, 11.XI; 1 ♂.
Periplaneta australasiae (F.):
Gran Canaria, Arucas, 19.XI; only a thorax.

MANTODEA

- Mantis religiosa* L.:
Gran Canaria, Montaña de Arucas, 300 m, 19.XI; 1 ♀.
Hypsiroryphe gracilis (Burm.):
Tenerife, north of Santa Cruz, 11.XI; 2 larvae.
Lanzarote, Máguez, 26.XI; 1 larva.

ORTHOPTERA

- Platycleis sabulosa* Azam:
Tenerife, Mirador Pico de Flores, 700 m, near La Esperanza 10.XI; 8 ♂, 5 ♀.
Platycleis tessellata (Charp.):
Tenerife, Aguamansa, 1000 m, 16.XI; 3 ♂, 3 ♀.
Ariagona margaritae Krauss:
Tenerife, Mirador Pico de Flores, near La Esperanza, 700 m, 10.XI; 1 ♂.
Gryllus bimaculatus de Geer:
Tenerife, Mirador Pico de Flores, near La Esperanza, 700 m, 10.XI; 3 ♂ larvae.
Gryllomorpha longicauda Ramb.:
Tenerife, El Portillo, 10.XI; 1 ♂.
Arminda burri Uvarov:
Gran Canaria, Teror, 450 m, 22.XI; 2 ♂, 2 ♀.
Calliptamus plebejus (Walk.):

Lanzarote, Máguez, 26.51; 2 ♀.
Gran Canaria, La Cruz de Tejada, 1450 ni; 1 ♀.
Locusta migratoria (L.), phase *danica* (L.):

Sphingonotus rubescens (Walk.):
Lanzarote, between Arrecife and Tahiche, 24.XI; 1 ♂, 1 ♀.
Wernerella picteti (Krauss):
Lanzarote, between Arrecife and Tahiche, 24.XI; 1 ♂.

m)

DERMAPTERA

Anisolabis maxima (Brullé):
Tenerife, Montaña Verde, 13.XI; 7 ♀.
Gran Canaria, La Cruz de Tejada, 1450 m, 21.XI; 11 ♂, 10 ♀
